

D&D Manufacturing, LLC, is dedicated to on-time delivery of high quality, precision machine parts, from large scale component pieces to detailed sub-assemblies.

We believe in hiring skilled craftsmen and investing in innovative technologies. This combination enables D & D Manufacturing to meet customers' unique and exacting requirements.

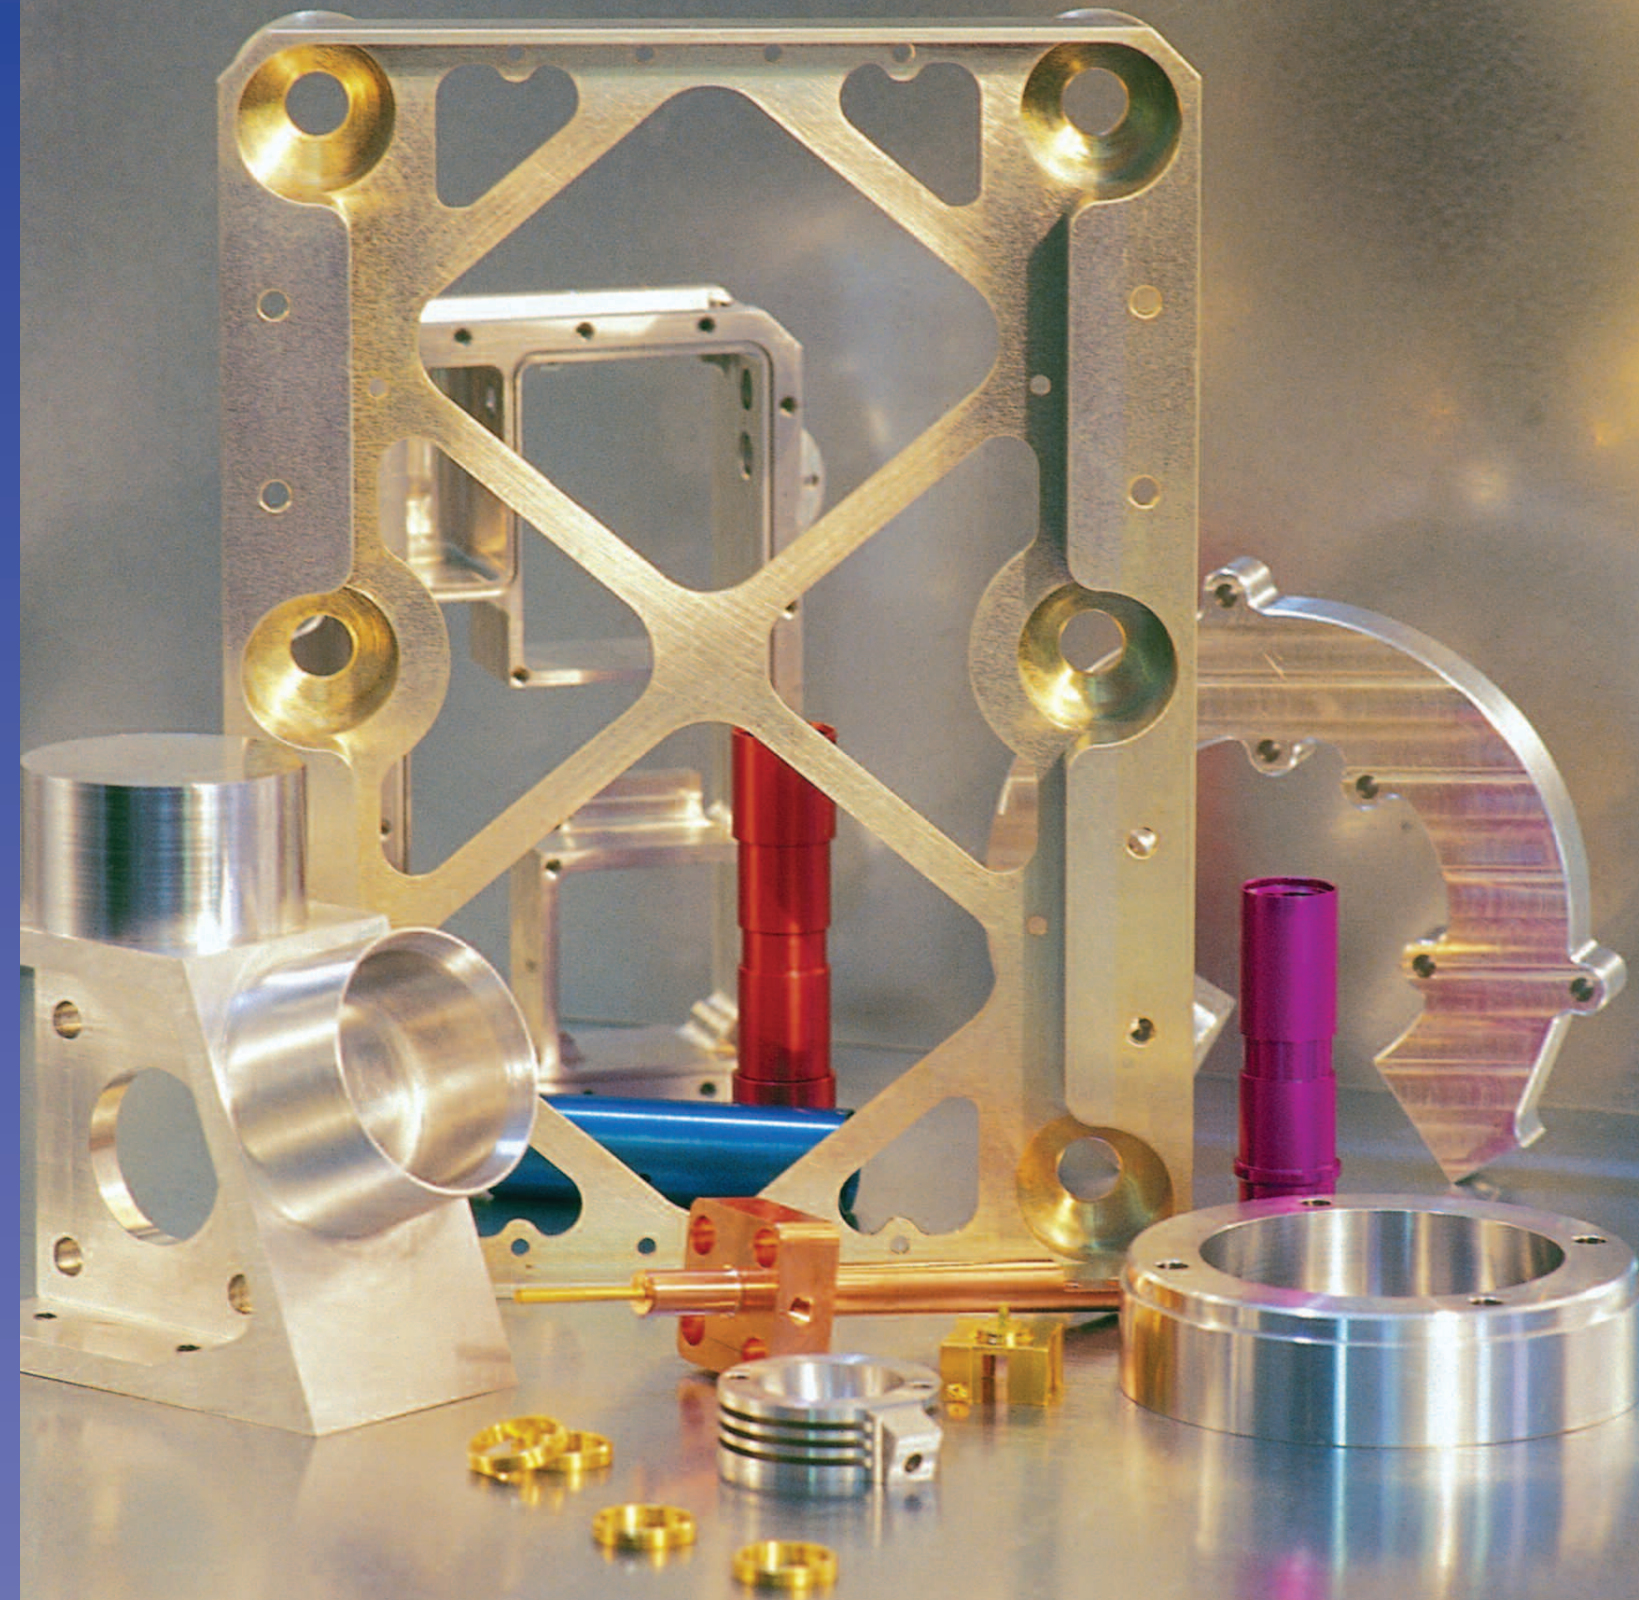

As a full service contract manufacturing company, D&D Manufacturing offers comprehensive manufacturing support and turn-key build services for the electronic, medical, semiconductor, telecommunications, instrumentation, lighting, automotive, industrial, bio-tech, and hi-tech related industries.

MANUFACTURING
Prototype & Production Machining

C&C Lathes with Auto Load Bar Feeders

Newest, high capacity machines are fully automated allowing continuous operations which result in a very effective, large volume output.

Welding Department

Our on site welding facility makes it possible to manufacture entire assemblies in house, in addition to performing piece part welding tasks. Our broad spectrum welding allows us to handle aluminum, stainless steel and other specialty metals.

C&C Milling Machine Department

New, large capacity machines produce high precision parts and a broad range of milling services, including 4th axis capabilities. Our constantly updated software system provides full access for our customers' geometry files, which in turn allows for a quicker and more accurate manufacturing process.

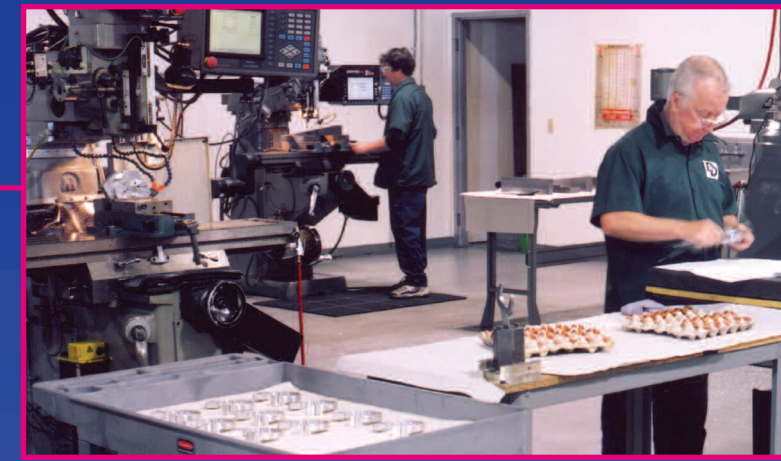

Manufacturing Floor

The open, well lit manufacturing floor allows very easy access to machines, which in turn results in an efficient flow of work and materials across the tiled work area. The same layout also allows timely clean up and maintenance.

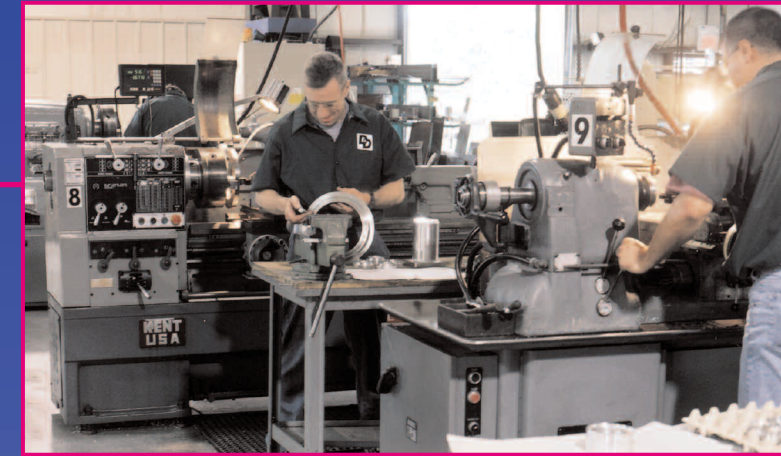

Manual Milling Department

C&C controlled Bridgeports have high flexibility which can respond to customers' changing requests and still yield quick turnarounds.

Manual Lathe Department

Multiple manual lathes, fully equipped with digital readouts, provide a large yet flexible shop capacity, ready to meet customers' various demands without sacrificing quality or output.

Engineering Department

With our most up to date cadcam and computer aided machinery software, D&D Manufacturing has a fully integrated network and software system that provides complete file sharing with both our customers and vendors.

Inspection and Quality Control Department

State of the art inspection equipment including CMM machines, optical comparator and micro heights that inspire quality from the initial setup process to the final inspections.
